

1800WPS WIRELESS PORTASCOPE

System Intro

WIRELESS APPLICATION

Wireless Transfer

We can explore anywhere that we want more smoothly without the cable. We can send the image to a big screen in 50M away.

Comprehensive application mode

Three different manipulative modes, as if having three endoscopes at the same time, can fulfill all your needs in different circumstances.

Completely Portable

No need for any other external light, power or screen. Just need a palm-sized console then you can explore anywhere in anytime.

TWO-HAND MODE

You can hold the console in a perfect height even though checking the undercarriage or the air-conditioner.

A-HAND MODE

In some special working environment you need to remove the obstacle during manipulating the insert tube. At this moment, you can place the separable console on a stable platform, WCP can "give you a hand" then.

FREE-HAND MODE

Signal will shift to physical circuit after handle inserted into the socket, but not of the transfer in RF mode. It means 1800WPS will not affect the others or be affected by the others. In addition, adjust the insert tube in a right angle, WCP can work as a desktop enlarger.

Light-path isolate

- Stay high definition of the image
- Reduce the stray light
- Easy to clean
- Provide full protection for the tip
- Upgrade the quality of the photo
